Technical information

- API introduction
- Architecture
    - Adding device notion
    - Design change to capture app activity
    - Encryption approach
    - Push Notifications
    - Request interception strategy
        - Intercepting HTTPS traffic
        - VPN approach
    - User photo
- Build
- Cluster architecture
- Code
- Deploy
- Development environment
- Development process
- IOS VPN Setup
    - iOS VPN without OpenVPN app
- Perl script to pass events from SmoothWall to the Yona server
- Running Yona with Kubernetes
    - Running Yona with Istio in Minikube
- Schema evolution with Liquibase
- Technology overview
- Test
    - Benchmarking
        - Benchmark Install and run JMeter Benchmark
        - Benchmark Results
        - Benchmark script 2016
        - Benchmark script current
        - Categories and IDs
        - Create Random User and Buddy values
        - Set random date and time for start and stop activity
        - Special requests
    - Testing activity reporting through integration tests
    - Testing the server manually
    - Test REST requests - Invite existing user as buddy
    - Test REST requests - Invite new user as buddy
- Yona properties
